

Fundamentals of Web Programming (Practical) – IT1144 (P)

In-Course Assessment Examination (ICAE – 02)

Time Allowed: 1 Hour 15 Minutes

Instructions

1. Create a new folder using your Registration Number (E.g., 2024IT001).
2. Save all HTML, CSS, JavaScript files, and images inside the folder.
3. Use the resources from folder named as 'IT1144_resources'.
4. Upload the completed folder to the Z drive.
5. Use exact file names as specified in the questions.

Question:

You are required to create a simple Hotel Reservation Website using HTML, CSS, and JavaScript.

Create the following files:

- index.html
- booking.html
- style.css
- script.js

Part A - Home Page Design (40 Marks)

- a) Create an *index.html* file and link the external stylesheet *style.css*. (2 Marks)
- b) Apply the following universal selector in *style.css*: (3 Marks)
- margin: 0;
 - padding: 0;
 - font-family: serif;
- c) Create a main container using a <div> with the class name **main**. (2 Marks)
- d) Define the .main class with the following properties: (8 Marks)
- Use hotel.jpg as the background image.
 - Display the background image to cover the entire screen.
 - Center the image.
 - Prevent image repetition.
 - Apply a linear-gradient overlay to improve text visibility.

e) Create a navigation bar using a <nav> element with the class name **navbar**. (2 Marks)

f) Insert a logo image (logo.jpg) inside the navigation bar with the class name **logo**.

(2 Marks)

g) Create a navigation menu containing the following navigation links:

(4 Marks)

- Home
- Rooms
- Services
- Contact

h) Style the navigation menu as follows:

(5 Marks)

- Remove list bullets.
- Display menu items in a single row.
- Add spacing between menu items.
- Set link color to white.
- Remove text decoration.
- Display text in uppercase.

i) Style the logo as follows:

(4 Marks)

- Width: 100px
- Circular appearance
- Add a simple border
- Change cursor to pointer on hover

j) Add a content section that includes:

(3 Marks)

- Hotel title using an <h1> element
- Short description using a <p> element

k) Create a button labeled "**Book Now**".

(5 Marks)

- When clicked, the user should be redirected to *booking.html*.

Part B – Booking Page Design (40 Marks)

a) Create *booking.html* and link both *style.css* and *script.js*. (2 Marks)

b) Design a booking form containing the following fields:

Customer Name (Text Box) (3 Marks)

Email Address (Email Field) (3 Marks)

Phone Number (Text/Number Field) (3 Marks)

Room Preference (Dropdown Menu) (5 Marks)

- Single Room
- Double Room
- Deluxe Room
- Family Room

Payment Method (Radio Buttons) (5 Marks)

- Cash
- Card
- Online Transfer

c) Add a Submit button. (3 Marks)

d) Style the booking form as follows: (10 Marks)

- Center the form on the page.
- Add suitable padding.
- Apply border radius.
- Use appropriate colors.
- Make the form visually attractive.

e) Style the Submit button as follows: (6 Marks)

- Background color
- Hover effect
- Rounded corners

Part C – JavaScript Functionality (20 Marks)

- a) Create a JavaScript file named *script.js* and link it with *booking.html*. (2 Marks)
- b) Create a function named `submitBooking()`. (2 Marks)
- c) Use the `onclick` event of the Submit button to call the `submitBooking()` function. (2 Marks)
- d) When the Submit button is clicked:
- Read the values entered in:
 - Customer Name
 - Email Address
 - Phone Number
- (3 Marks)
- e) Display the entered details below the form using `innerText` in the following format: (8 Marks)
- f) After displaying the booking details, show the following alert message: (3 Marks)

```
alert("Ordered Successfully!");
```
